## Document Information

### Audience

Clinician Experience customers

### Purpose

Provides an overview of the features and functions in Clinician Experience

### Availability

December 2023

### Prerequisites & Dependencies

Clinicians Experience leverages existing features in \_\_\_\_\_ products that must be installed and configured prior to Clinician Experience deployment. The prerequisites include:

- \_\_\_\_\_ eMAR – Electronic Medication Administration Record (eMAR) with Barcode Administration
- \_\_\_\_\_ Patient Care Documentation – fully-integrated, multi-disciplinary clinician application that allows for patient charting
- \_\_\_\_\_ Order Management – provides the ability to enter and manage orders
- \_\_\_\_\_ Enterprise Clinicals – an Enterprise solution used to receive and process orders
- Protocol Handler version 11.0.16.1

#### NOTE

Sites must perform the following actions:

- Build Clinical Document Assessments and note templates
- Update Nursing Orders and Interventions type A and N
- Review existing Patient Care Orders

### \_\_\_\_\_ Clinician Experience 2023 R1 Features

This document describes workflows and features introduced by \_\_\_\_\_ Clinician Experience that are visible to clinicians using \_\_\_\_\_ Enterprise Clinicals.

#### IMPORTANT

Clinicians at facilities that have not fully implemented Clinician Experience must continue using the existing Patient Care workflows until Clinician Experience implementation is completed.

---

## Related Documents

For an in-depth description of Clinician Experience, including detailed workflow instructions, see:

- [Clinician Experience 2023 R1 Summary of Enhancements](#)
- [Clinician Experience 2023 R1 Release Notes](#)
- [Online help](#)
- [Protocol Handler 2023 R1 User Guide](#)

## Overview

Clinician Experience enables healthcare clinicians to focus on delivering the highest quality patient care by providing intuitive solutions and streamlined workflows. This is achieved by improved communication and collaboration, promoting effective decision making, and enabling care in every setting. Clinician Experience users can:

- Easily access, filter, and acknowledge patient and order information
- Effectively manage individual patient information
- More accurately assess patient visits
- Use the patient worklist to manage patient care orders, tasks, and medication records
- Assemble an in-depth discharge plan for patients

## Value and Benefits

Clinician Experience offers the following values and benefits to clinics and hospitals:

- Enhanced clinician tools
- Provide the ability to provide patient care from a single platform
- Streamlined eMAR workflows
- Enhanced reporting options
- Meeting needs of clinical departments within the hospital setting and levels of care
- Provide the ability for information to be available throughout Enterprise
- Offer a real-time availability of patient documentation in the chart, such as vital signs, medication administration, and new allergy or immunizations

## Features at a Glance

Clinician Experience provides the following features and functionality:

- **Patient List**
  - Patient Lists & Filters
  - Acknowledge STAT & New Orders
- **Patient Chart**
- **Assessments**
  - Anatomical Assessments
  - Enhanced Assessments
- **Patient Worklist**
  - Activities Tab
  - Orders Tab
  - eMAR Tabs
- **Metric Values for Patient Weight**
- **Clinical View Reports**

## Clinician Experience Personas

Clinician Experience provides read/write access to all Enterprise Clinicals personas.

The following personas have view only permission:

- PerioperativeViewOnly
- Pharmacy Tech I
- Pharmacy Tech II
- Pharmacist

## Patient List

Patient lists display patient information and allow access to the patient chart to complete patient documentation.

## Patient Lists & Filters

Clinicians can access patient information through various lists:

- **Active Patients** – Displays active patients

Patient List

Active Patients My Patients Outpatient Pre Admit / Pre Reg Discharged

Patients that display on each list are determined by the clinician's Hospital Service codes (HSV) and nursing stations. Information in patient lists can be filtered by nursing station, patient type, and most columns (in ascending or descending order). Each list varies in the information that is displayed, available filter options, and other functionalities.

#### NOTE

Patients with previous encounters display with  next to their name within a patient list, which can be clicked to display them.

After selecting a patient, clinicians can easily navigate through patients within a list while maintaining their tab location via the patient banner.

-  – Next patient
-  – Previous patient
-  – Back to patient list

## Acknowledge STAT & New Orders

The order acknowledgement feature enables clinicians to review and acknowledge a patient's STAT or new order alerts. The following alerts are accessible via the **Alert** column in the **Patient List** or by navigating to a patient's **Order** tab:

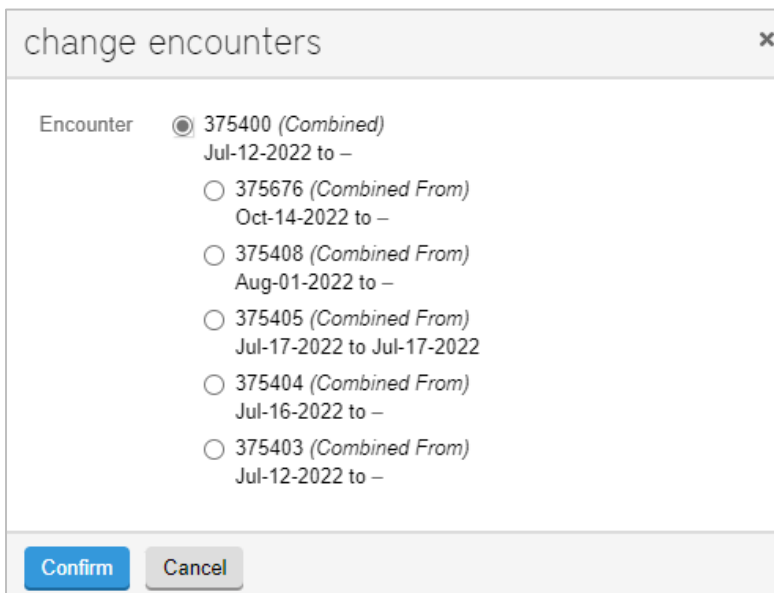

-  – New STAT orders
-  – New orders

## Patient Chart

Clinicians can access the following features from Patient Chart:

- **Combined Encounters** – Helps clinicians identify and access current patient encounters that are combined with previous encounters for the same patient. Combined encounters are accessible via **Encounter** in the Patient Banner.

The screenshot shows a dialog box titled "change encounters" with a close button (X) in the top right corner. The dialog contains a list of encounters under the heading "Encounter". The first encounter, "375400 (Combined) Jul-12-2022 to –", is selected with a radio button. Below it are five other encounters, each with an unselected radio button: "375676 (Combined From) Oct-14-2022 to –", "375408 (Combined From) Aug-01-2022 to –", "375405 (Combined From) Jul-17-2022 to Jul-17-2022", "375404 (Combined From) Jul-16-2022 to –", and "375403 (Combined From) Jul-12-2022 to –". At the bottom of the dialog are two buttons: "Confirm" (in blue) and "Cancel" (in gray).

- **Patient Demographics** – Provides information on a patient's demographics, insurance information, and physician information.

**Documentation Provided** – Allows clinicians to add, modify, and retract information related to documentation that has been provided to a patient. The types of documentation provided includes patient education, discharge summary, transfer summary, C-CDA Continuity of Care Document, and C-CDA Discharge Summary.

The screenshot displays the 'documentation provided' section of the Patient Chart interface. On the left, there is a sidebar with tabs for 'current' and 'past'. Below these tabs is a list of document types: 'patient education resources', 'discharge summary', 'transfer summary', 'C-CDA continuity of care document', and 'C-CDA discharge summary'. Each type has a corresponding 'Patient' icon and a date/time stamp. A 'Show Retracted' button is at the bottom of the list. On the right, the 'add documentation provided' form is visible. It includes fields for 'Documents Provided' (a dropdown menu), 'Date / Time Provided' (a date and time picker), and 'Provided To' (a dropdown menu). There is also a 'Comments' field with a '150 character limit' warning. At the bottom of the form are 'Save' and 'Cancel' buttons.

## Patient Education

Patient education can be accessed by clinicians through a new **Patient Education** button in the **discharge plan** and **documentation provided** sections of **Patient Chart**—which launches Elsevier, a third-party tool formerly known as ExitCare.

Additionally, a new **Info Button Knowledge Portal** button is accessible via **discharge plan** only, which launches a tool that provides links to MedLine Plus and contains information relevant to the patients' problems and medications in their discharge plan.

## Assessments

Assessments help clinicians document and evaluate patient information.

### Anatomical Assessments

Anatomical assessments allow clinicians to document a patient's wound information with streamlined workflows using anatomical images. Clinicians can quickly move through questions and responses, and can also add, modify, or retract them. In addition, clinicians can comment on wound sites and mark them as healed.

anatomical

+ Cancel

#	Location	Status
1H	Chest	Healed
2	Back	Active Complete

### Enhanced Assessments

Enhanced assessments help streamline the assessment and documentation workflow when working with care plans. Clinicians can:

- Place orders from linked procedures
- Flag responses as critical when completing an assessment
- Incorporate diagnoses linked to completed assessments into a patient's care plan
- Complete CQM assessments
- Use the "eCQM Assessments" filter in the Assessments section

## Patient Worklist

The **Patient Worklist** allows clinicians to review a patient's activities, orders, and medication records. It consists of multiple subtabs that vary depending on the medication ordered for a patient.

The worklist toolbar is used to review activity, view the worklist legend, and navigate between shifts.

Review Activity

### NOTE

Clinicians can click worklist items in any tab to view additional information, such as order details, audit information, and more.

## Activities Tab

The **Activities** tab allows clinicians to review, choose to perform, and choose to not perform patient care orders and care plan tasks.

chart ▾ documentation worklist ▲ order <span>STAT</span>

## Orders Tab

The **Orders** tab allows clinicians to view, collect, and print ancillary orders. It helps improve patient safety by giving nurses the ability to scan a patient's armband barcode or lab collection barcode to confirm lab collection is being done for the right patient and/or order. If lab collection was done for the wrong patient and/or order, an error message displays.

## eMAR Tabs

The Electronic Medication Administration Record (eMAR) tabs allow clinicians to review and administer medication for a patient. It also allows clinicians to scan patient and medication barcodes into the worklist. eMAR tabs in the **Patient Worklist** consist of the following:

- All Meds
- Scheduled
- Unscheduled

- PRN
- IV Fluids
- IVPB

**NOTE**

Additional tabs that display in a patient's eMAR worklist depend on what medication is ordered to them. Medications can be assigned a MAR category during the order stage, which will add a corresponding MAR tab to the worklist.

## Patient Transfer via Patient Banner

Users with applicable personas are now able to transfer patients directly from the patient banner. This enhancement improves workflow and ensures accurate reporting and documentation. When a patient is transferred, their location is updated throughout Clinician Experience.

Patients can be transferred to a new location by clicking the patient's **Assigned** location in the Patient Banner, which then displays the **transfer patient** window for transfer information to be entered.

## Metric Values for Patient Weight

Facility administrators can choose to require that patient weight is entered and displayed only using the metric unit of measurement. If the **Metric weight display and input** option in WAFM is set to **Yes**, patient weight will not be available for input or display using the standard weight.

### NOTE

The default setting for the **Metric weight display and input** option in WAFM is **No**, which allows for both metric and standard weight input and display.

## Clinical View Reports

Clinicians can now access the following reports:

- **Clinical Documentation** – Provides a variety of documentation details about a patient, including vital signs, activities, discharge instructions, and more.
- **Clinical Reconciliation** – Provides details about a patient's clinical reconciliation.
- **Patient Discharge Instructions** – Provides information about a patient's discharge instructions.
- **Patient Discharge Summary** – Provides details about a patient's discharge from a facility.
- **Patient Summary** – Provides broad details about a patient such as allergies, active medications, and more.
- **Patient Transfer Summary** – Provides details about a patient transfer, including transfer medications, procedures, and more.
